# Problem

Our company is committed to developing future technologies aimed at addressing global challenges, such as climate change. One of our main focuses is on the drastic decline in wild bee populations.

Since 1992, 85% of bee colonies and other essential insects have died, significantly affecting global agriculture. This decline, along with climate change, reduces agricultural productivity by 25% annually, potentially leading to a severe global food crisis.

## **Tural Ismayilzadeh**

### **Senior chairman and founder**

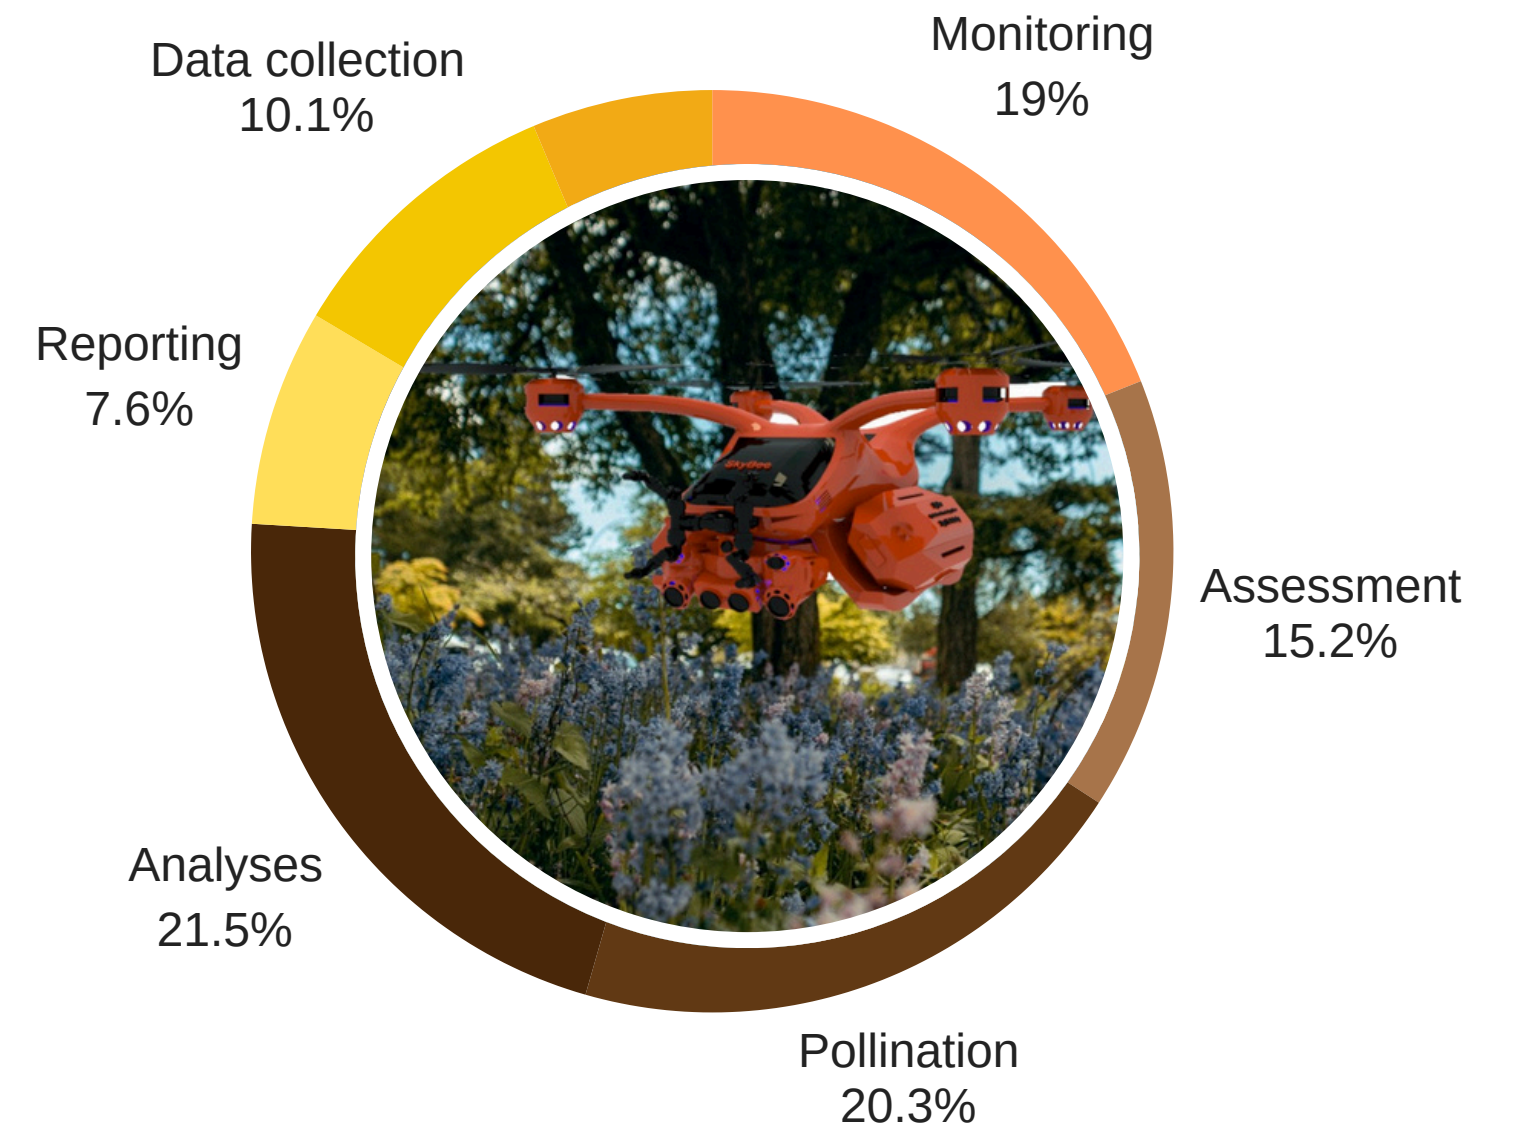

Senior chairman and founder of the Sky Life Industry. Futurologist. World startup champion. Researcher and creator of future social innovations.

# Solution

We developed SkyBee Drones, which are designed to perform artificial pollination and offer a range of additional services:

# Our product

Our team consists of experienced professionals in innovation. We have designed a smart drone technology specifically for artificial pollination. The concept integrates a mobile app, Big Data, and environmentally friendly pollination methods.

Key Specifications: 28x28x22 cm dimension, service in 5 Ha area in 1 day, data processing up to 10 km, flight up to 25 km and warranty up to 5000 km.

# Website traffic report

36,3%

traffic to the site comes from search engines

44,5%

traffic to the site comes from our social media channels

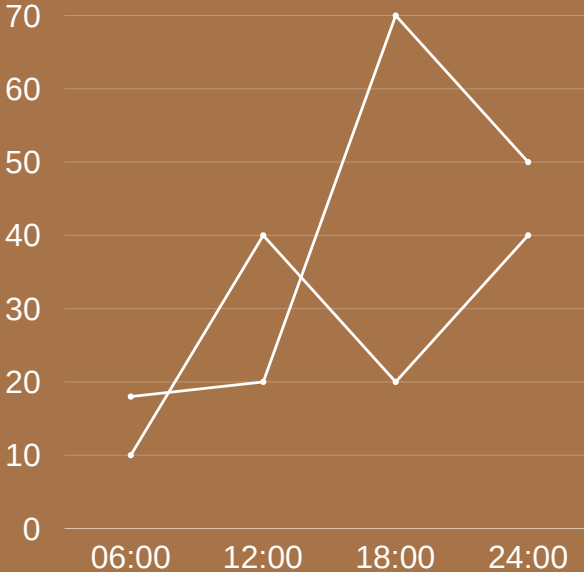

19,2%
